-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Drawings***

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Williams (U.S Patent No. 5,689,144).

Williams discloses in figs. 12A- 20 including:

Regarding claim 1: a double gate FET (M1) which comprises applying, in response to a first signal (VG) fed into a first gate electrode (G), a second signal (VB) that has a same signal-level temporal-change direction as the first signal (VG) and has

a signal level shifted (i.e, see Figs. 16A-16C) by a predetermined magnitude to a second gate electrode (VB) (see Figs. 16A-16C).

Claim 2 is similarly rejected as claim 1: a double gate FET (M1) which comprises applying, in response to a first signal (VG) fed into a first gate electrode (G), a second signal (VB) that has a same signal-level temporal-change direction as the first signal (VG) and has a slower or faster rise time or a fall time to a second gate electrode (the first signal VG of the first gate electrode G is fed through R1 and applied to the second gate electrode VB, see figs. 12A-12C).

Claim 3 is also similarly rejected as claims 1-2: a double gate FET (M1) which comprises applying, in response to a first signal (VG) fed into a first gate electrode (G), a second signal (VB) that has a same signal-level temporal-change direction as the first signal (VG) and has a predetermined time difference to a second gate electrode (VB) (See Figs. 12A-20).

Because these claimed structure are fully met by Williams, the recited functions in claims 1-3 will necessarily be inherent in Williams, as held by the court in *In re Best*, 195 USPQ 430.

Claim 4 is similarly rejected as claims 1-3.
